CALL WALKTHROUGH

# Schlüter & Maack

Every grain settlement starts as a contract and a pile of Elevator Receipts. AI reads and matches the papers, holds what disagrees for a person, and prepares the settlement for release.

**THE LEAD**

**Scott Cunningham**

Spoke on the mustard market outlook panel at the Pulse & Special Crops Convention.

Copied: Austin King-Cunningham, C. Rojas.

**THE COMPANY**

**Schlüter & Maack Canada**

Licensed primary elevator at Balgonie, Saskatchewan.

Systems: Dynamics NAV, Excel.

**THE CALL**

**Tue 17 Nov 2026, 12:00 CET**

On Zoom. Invite sent by our team.

Scott is back from travel the week of 16 Nov.

**THE DEMO**

**Private link**

schluter-maack-<hexaa suffix>

Available till Wed 25 Nov 2026.

## ON THE CALL, IN THIS ORDER

1. How it runs today
2. Where we would help
3. Settlement Overview
4. Bring a Settlement In
5. Mismatches to Review

Sample data and a simulation. Nothing is processed for real. Never write the password suffix down.

# The problem, in their words

> *“A tool that reads contracts and Elevator Receipts, checks weights and prices, then sends clean data into the system your team uses.”*

From our first email. Scott replied: “Yes I would be interested in seeing this.” He copied the merchandising and logistics side of his team.

| | 1 to 5 | 6 to 7 | 8 | 9 | 10 to 11 | 12 | 13 |
|---|---|---|---|---|---|---|---|
| TODAY | Purchase, contract, load, receipt | Papers matched and checked by hand | A person decides if it agrees | Merchandiser sorts out the rest | Settlement worked out and keyed in by hand | Approved, payment released | Producer paid |
| WITH HEXAA | Unchanged | Read, matched and checked by AI | AI decides what agrees | A person decides | Worked out and sent into NAV by AI | A person releases | Unchanged |

Same thirteen steps, same numbers in both rows. Grey is yours and unchanged, amber is the same step done by AI instead of by hand, plum is decided by your people. Nothing is replaced and nothing is released by AI.

## THE SETTLEMENT IN THE DEMO

Contract SM-CA-26-0417, Kozak Prairie Farms Ltd., Yellow Mustard: 60,000 kg at 47.50 ¢/lb, 5% either way. Four loads came in.

| | | |
|---|---|---|
| **Price** | **The price in NAV is lower than the signed contract**<br>NAV holds 45.75 ¢/lb, the contract says 47.50. About C$2,512.77 short for the producer if settled from NAV. | Critical |
| **Quantity** | **More grain delivered than the contract allows**<br>65,130 kg in, 63,000 kg allowed. The last 2,130 kg has no agreed price, about C$2,230.60. | High |
| **Grade** | **One load graded below what the price assumes**<br>ER-205310 is No. 2 Canada, the price assumes No. 1 Canada. About C$538.44 off the load. | Medium |
| **Weight** | **The net clean weight does not add up on one receipt**<br>ER-205774 prints 16,279 kg, its own figures give 15,979 kg. | Low |

Worked out and prepared, not released: **C$48,923.10** ready, **C$18,742.76** held for a decision.

## WORDS ON SCREEN

| | | | |
|---|---|---|---|
| **Elevator Receipt** | The paper issued for every truckload | **Net clean weight** | Gross, less tare, less dockage |
| **Dockage** | Weed seed and dirt taken off the weight | **Grade** | No. 1 Canada. A lower grade pays less |
| **Tolerance** | How far delivered may differ from bought | **¢/lb** | Cents per pound, how the price is quoted |
| **Held** | Waits for a person to decide | **Prepared, not released** | AI never releases a payment |

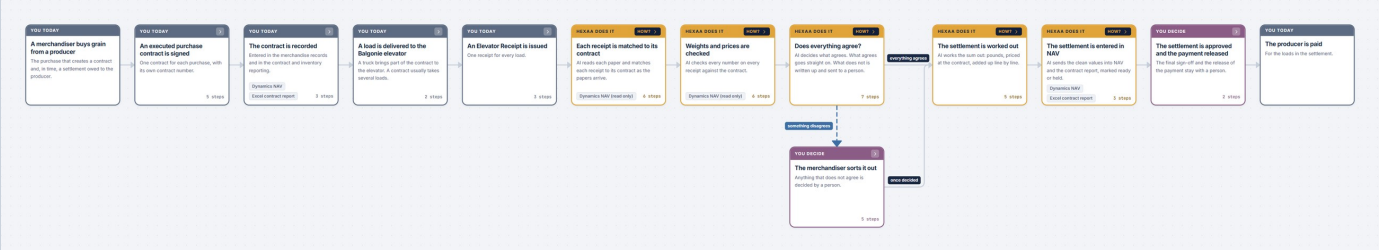

# Open on their process

## 1 How it runs today

| | |
|---|---|
| **Show** | Their own settlement in thirteen numbered cards, in flowchart shapes. Nothing of ours is on it. It starts at the real trigger: a merchandiser buys grain, which is what makes a settlement owed. |
| **Ask** | Walk it with them and let them correct it live. 14 details carry a guess tag: the questions at the end start with them. |

## 2 Where we would help

| | |
|---|---|
| **Show** | The same thirteen cards in the same order. Grey is yours and unchanged. Amber (6, 7, 8, 10, 11) is your step done by AI. Plum (9, 12) stays with your people. |
| **Say** | Nothing is replaced. AI sits on top of the steps you already have, and every step of yours is still there under the same title. |

### OPEN A CARD WITH “HOW?”

Here is card 8 opened. Its steps tell you three things at a glance.

**Yours today.** A step with “who · hexaa, instead of by hand” is a step you already do. It has the same title on both views.

**Added by AI.** A step with “who · Added by hexaa” appears only on this view. It is what AI adds around your step: the mismatch written up with both papers, sent to the right person.

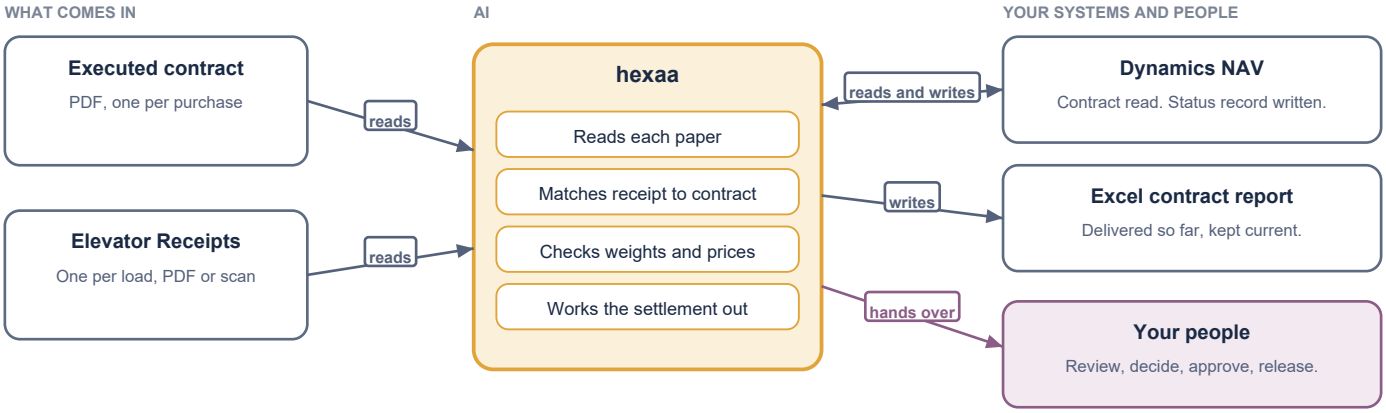

**Where it touches your system.** The “records” line says what is read (NAV) or written (NAV, Excel), and which demo page shows it.

**One tag only.** “guess” marks a detail we filled in to complete the line. Nothing else on the diagram is hedged.

# From the purchase to the check

## WHERE AI MEETS YOUR SYSTEM

AI sits between the papers and your systems. It reads the papers and the contract in NAV, writes a status record into NAV and keeps the Excel report current. It never pays, and never changes a contract.

| | The step, and why it matters | How it runs today | With hexaa |
|---|---|---|---|
| 1 | **A merchandiser buys grain from a producer**<br>This creates a contract and, later, a settlement owed. | The merchandiser agrees quantity and price with a producer. | Unchanged. |
| 2 | **An executed purchase contract is signed**<br>It is the yardstick every receipt is checked against. | A signed contract with its own number: producer, commodity, quantity and price terms.<br>**guess**: the delivery period; the grade the price is quoted on; a tolerance on the quantity | Unchanged. |
| 3 | **The contract is recorded**<br>So deliveries can be followed against it. | Entered in NAV and added to the Excel contract report.<br>**guess**: the price is keyed in by hand | Unchanged. Later AI reads the contract in NAV, read only. |
| 4 | **A load is delivered to the Balgonie elevator**<br>A contract usually takes several loads. Each counts towards the settlement. | A truck brings part of the contract to the elevator.<br>**guess**: the truck is weighed in and out; a sample is graded | Unchanged. |
| 5 | **An Elevator Receipt is issued**<br>It is the proof of what arrived. | One receipt for every load: who, what, when, the weight.<br>**guess**: the grade | Unchanged. It is the paper AI reads. |
| 6 | **Each receipt is matched to its contract**<br>A receipt against the wrong contract is the easiest mistake to miss. | Someone reads each paper and finds the contract it belongs to.<br>**guess**: the contract and its receipts are put together; the delivery date is compared | AI reads the contract and every receipt as they arrive, reads the contract in NAV (read only), and attaches each receipt to its contract by number, producer, commodity and date. |
| 7 | **Weights and prices are checked**<br>This is where money is overpaid or lost. | By eye and calculator: the weight, the total against the quantity, the units and the price.<br>**guess**: the grade is the one the price assumes; the price in NAV is the signed price | AI works each weight out again, adds the loads to a running total against the quantity, converts the units, applies the contract price and reads the price in NAV. |

# From the decision to the payment

| | The step, and why it matters | How it runs today | With hexaa |
|---|---|---|---|
| 8 | **Does everything agree?**<br>Everything after it depends on the answer. | A person decides whether the papers line up.<br>**guess**: is the grade the one the price assumes? | AI decides what agrees. What agrees goes straight on and nobody is interrupted. What does not is written up with both papers and sent to the person who can decide it. |
| 9 | **The merchandiser sorts it out**<br>These are commercial calls, not calculations. | Amend the contract, accept a lower grade or price, settle a dispute, chase what is missing. | Stays with your people. AI puts both papers in front of them with a suggested next step, and never acts on it. |
| 10 | **The settlement is worked out**<br>It is the amount owed to the producer. | Weight in pounds, times the contract price, less any discount.<br>**guess**: less a discount for a lower grade; anything undecided is left out | AI works the sum out line by line. Lines that disagree are held, the rest are marked ready. |
| 11 | **The settlement is entered in NAV**<br>So the records match what was settled. | The figures go into NAV and the Excel contract report. | AI sends the clean values in as a status record, ready or held. It is never a payment. |
| 12 | **The settlement is approved and the payment released**<br>Someone must answer for the money. | A person signs off and releases the payment. | Stays with your people. |
| 13 | **The producer is paid**<br>The end of the line. | For the loads in the settlement. | Unchanged. |

**The line AI does not cross.** It does not amend a contract, accept a grade or a price, settle a dispute, approve a settlement or release a payment. Those are the plum steps, and they stay with your people.

### WHAT AI HANDLES, AND WHAT STAYS WITH PEOPLE

#### AI handles

- Reads the contract and every receipt
- Reads the contract in NAV, read only
- Matches each receipt to its contract
- Checks weights, units, quantity and price
- Decides what agrees, and lets it straight on
- Writes each mismatch up with both papers
- Works the settlement out, ready or held
- Sends a status record into NAV and Excel

#### Stays with your people

- Amend a contract
- Accept a lower grade or a price exception
- Settle a dispute with the producer
- Chase a missing contract or receipt
- Approve the settlement
- Release the payment

# Then show one real settlement

## 3 Settlement Overview

LOADS AGAINST THE CONTRACT

Every Elevator Receipt for this contract, weighed up and added to a running total against what the contract allows. Anything that does not agree is marked in its row.

| CONTRACT | PRODUCER | QUANTITY | ALLOWED | PRICE | DELIVERY PERIOD |
|---|---|---|---|---|---|
| SM-CA-26-0417 | Kozak Prairie Farms Ltd. | 60,000 kg, 5% either way | 57,000 to 63,000 kg | 47.50 ¢/lb | 15 Sep to 31 Oct 2026 |

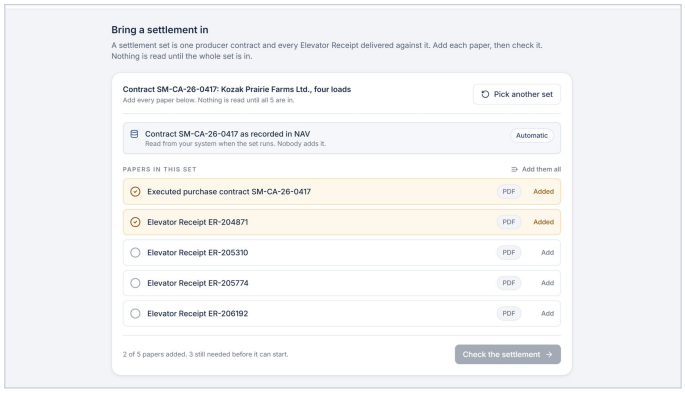

| Receipt | Delivered | Grade | Gross kg | Tare kg | Dockage kg | Net clean kg | Running total kg | Check |
|---|---|---|---|---|---|---|---|---|
| ER-204871 | 22 Sep | No. 1 Canada | 31,280 | 14,820 | 198<br>1.2% of net | 16,262 | 16,262 | Agrees |
| ER-205310 | 02 Oct | No. 2 Canada<br>Price assumes No. 1 | 31,540 | 14,960 | 298<br>1.8% of net | 16,282 | 32,544 | Grade is lower › |
| ER-205774 | 16 Oct | No. 1 Canada | 31,020 | 14,880 | 161<br>1.0% of net | 15,979<br>Receipt prints 16,279 | 48,523 | Weight is off › |
| ER-206192 | 29 Oct | No. 1 Canada | 31,760 | 14,900 | 253<br>1.5% of net | 16,607 | 65,130<br>63,000 at most | Over the maximum › |
| Total delivered | | | | | | | 65,130<br>2,130 over the maximum | |

Click a row that was flagged to open it on the Mismatches to Review page.

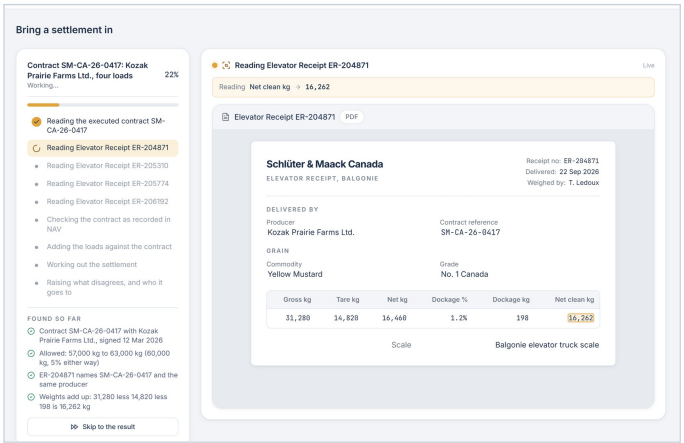

**Show** Start with the contract against NAV: the price row disagrees. Then the loads with their running total: 65,130 kg against 63,000 allowed. Then the settlement worked out, ready lines and held lines. Click a flagged row to open it.

**Say** Everything here is the same step you do today, shown as values. Nothing is a count or a dashboard.

## 4 Bring a Settlement In

A set will not start on a partial set

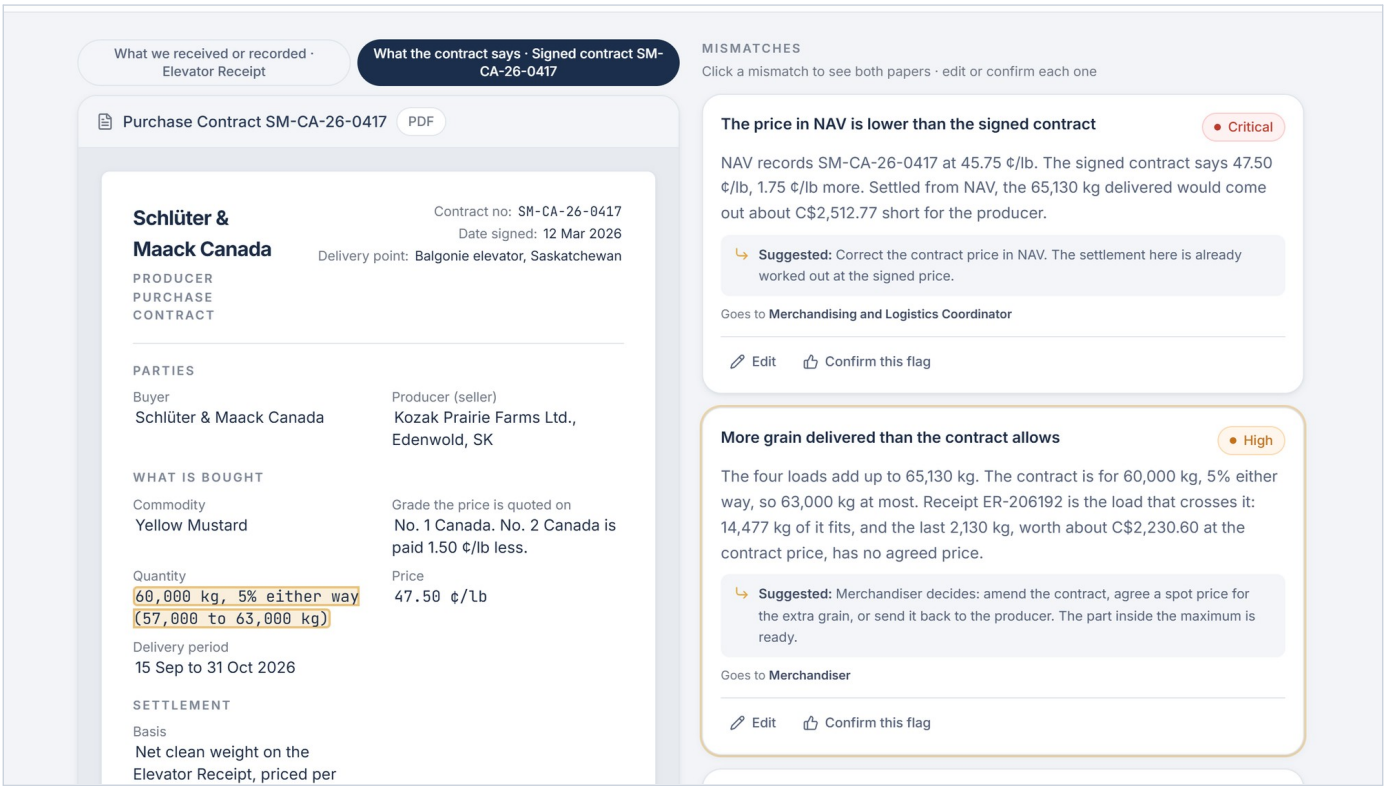

The contract is read field by field, the value typed out

**Show** Add two papers of five: the button stays off. Add the rest and run it. Watch a receipt being read, then the loads and the settlement filling in. Then run the clean set and the set with no contract on file.

**Say** AI will not guess at a partial set, and it shows its working while it reads.

# Mismatches, and the sum behind them

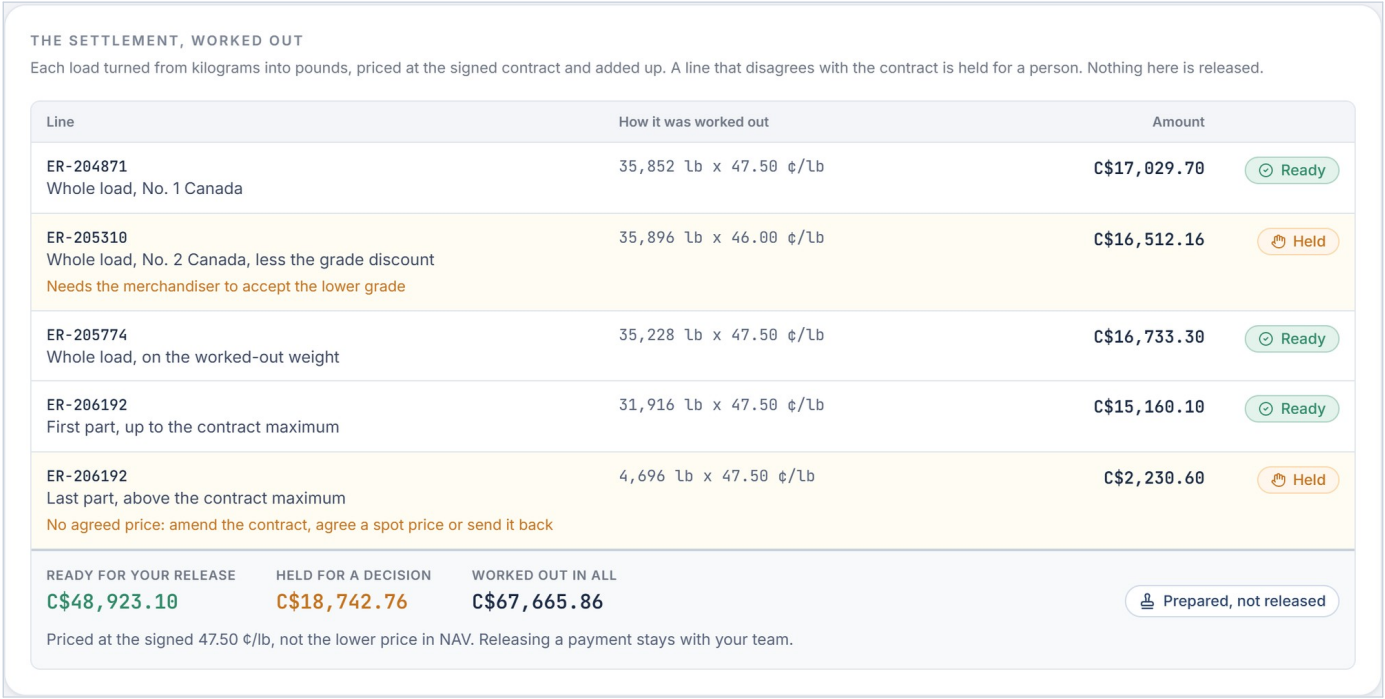

## 5 Mismatches to Review

**Show** Open the quantity mismatch and flip the tab: the receipt on the left, what the contract says on the right, the exact value highlighted. Edit a sentence, then confirm it.

**Say** Confirming passes the flag on with its evidence. It does not pay, amend a contract, or accept a grade or a price.

### AND THE SUM BEHIND IT

**Show** Back on the Overview: each load turned into pounds and priced at the signed contract. C$48,923.10 is ready, C$18,742.76 is held until a person decides, and the stamp reads Prepared, not released.

**Say** AI works the sum out. Releasing it is a separate step that stays with your people.

# Ask them to confirm

## THE GUESSED STEPS · most important first

| | |
|---|---|
| 1 | **Is a load graded, and does the price change with the grade?**<br>The demo prices No. 1 Canada and pays No. 2 Canada 1.50 cents per pound less. The grade check, the grade mismatch and the discount line all depend on it. |
| 2 | **Who puts a contract and its receipts together, and when: for each load, or once the contract is filled?**<br>Every check starts from one contract and all its receipts. This is the step the tool takes over first. |
| 3 | **Does a contract carry a tolerance on the quantity? What is it on a mustard contract?**<br>The demo uses 5 percent either way. The over-delivery mismatch depends on it. |
| 4 | **When part of a settlement is in question, is the rest paid, or does the whole settlement wait?**<br>The demo holds only the lines that disagree and prepares the rest. |
| 5 | **Is the contract price typed into NAV by hand? Does anyone check it against the signed contract?**<br>The demo shows a price in NAV that differs from the signed contract. That only happens if the price is keyed. |
| 6 | **Does a contract have a delivery period, and is a load dated outside it a problem?**<br>The demo checks each receipt date against a delivery period. |
| 7 | **Is each truck weighed in and out on a scale at Balgonie, with gross and tare on the receipt?**<br>The demo works the net weight out from gross, tare and dockage. |
| 8 | **Does your Excel contract report look like the one on the Overview?**<br>The columns and the status words on the Overview are filled in. |

## THEN, IF THERE IS TIME · most important first

### WHO AND HOW

- Who does this work today: the Merchandising and Logistics Coordinator, or Accounts Payable?
- Who approves the settlement and releases the payment?
- Is this the order the work happens in? Which card is in the wrong place?
- Is there a step on the line you would not want AI anywhere near?
- Is a settlement worked out for each load, or once for the whole contract?
- How do the contract and the receipts reach you: email, scan, paper at the elevator?
- What happens today when a receipt names a contract nobody can find?

### THE CHECKS

- Are these the right checks? Is there one you would not want flagged?
- What check is missing that you would expect every time?
- Where should the clean values land: NAV, the Excel report, or both?
- Which grains and contract types do you settle besides mustard?
- Is the process the same at Hamburg, or only at Balgonie?

### VOLUME AND COST

- How many settlements go through in a month, and does it change through harvest?
- How long does one take when it goes smoothly, and when it does not?
- What does it cost when a settlement goes out wrong: an overpayment, a correction, a call with the producer?
